

What's New

Symantec Backup Exec™ 11d for Windows® Servers

The Gold Standard in Windows Data Recovery

Symantec Backup Exec 11d for Windows Servers delivers continuous protection for Microsoft® Exchange and more granular recovery of Exchange, Microsoft SharePoint, and Microsoft Active Directory, as well as encryption and expanded platform support, including support for 64-bit environments. Combined with its existing family of high-performance agents and options, Backup Exec 11d is the gold standard in Windows data recovery.

What's new at a glance

Features	Benefits
Continuous Data Protection for Exchange Servers	Revolutionizes data protection by eliminating the daily backup window for Exchange backup jobs while still allowing recovery of individual mailboxes, messages, and folders. Included as a part of the Backup Exec Agent for Exchange.
Individual Email or Mailbox Recovery from Conventional Backup Jobs	IT administrators no longer have to run multiple jobs to protect the Exchange data store. They also no longer need to run mailbox (time-consuming "MAPI-based") backups to be able to quickly retrieve individual messages or mailboxes. Retrieve individual messages or mailboxes in seconds. Included as a part of the Backup Exec Agent for Exchange.
Continuous Data Protection for SQL Servers	Eliminates the daily backup window for Microsoft SQL Server and enables the recovery of database transactions that have been made right up to the time of the hardware or software failure. Included as a part of the Backup Exec Agent for SQL.
Additional Enhancements to the SQL Agent	Includes flexible recovery of SQL databases to redirect to alternate locations; data stream copy, allowing for quick recovery or restore redirection; integration of SQL Server 2005 snapshots into the Backup Exec catalog for a consolidated look at all data copies available for quick restore; and SQL backup verification to help ensure data that has been protected will be restorable at the time of recovery.
Flexible and Configurable Encryption	Enhancing data security, IT administrators can select to encrypt backup data so that it can be securely transmitted over the network and stored in an encrypted format on tape. Administrators can specify which data backup jobs are to be encrypted, allowing the flexibility to encrypt only sensitive data or data copies intended for offsite storage. Included as a part of the core Backup Exec offering.
64-Bit Media Server Support	Backup servers can now be hosted on 64-bit Windows operating systems to offer better backup performance. Supports Intel® Xeon EMT64, Intel Pentium® EMT64, AMD Athlon, and AMD Opteron processors. Included as a part of the core Backup Exec offering.
Granular SharePoint Recovery	Individual documents can now be restored from SharePoint Portal Server 2003, offering quick recovery of only the specific file or version of a file that has been deleted or corrupted. In addition, the SharePoint Agent has additional application support. Now you can use the agent with SharePoint Services in addition to SharePoint Portal Server. Included as a part of the Backup Exec Agent for Microsoft SharePoint Portal Server.
Protection for Oracle® RMAN on Windows or Linux® Servers	Now supporting Oracle 9i or 10g Recovery Manager (RMAN) backup on either Windows or Linux platforms. Administrators can set up backup and restore jobs from either the Oracle RMAN console or the Backup Exec admin console to dramatically reduce backup times and protect Oracle installations on either Windows or Linux servers. Included as part of the Oracle Agent for Windows and Linux Servers.

Data Sheet: Backup and Recovery

What's New: Symantec Backup Exec 11d for Windows Servers

Features (cont'd)	Benefits (cont'd)
Protection for Oracle RAC Configurations	A new agent supports quick backup and recovery of Oracle Real Application Clusters (RAC) configurations as well as standard Oracle databases on the Windows or Linux platform. Flexible to support both backup administrator and DBA initiated backup jobs.
Protection for IBM® DB2®	A new DB2 agent provides online, nondisruptive protection for DB2 databases on the Windows platform for more comprehensive database support. It offers one central view of all backups, whether DBA or backup administrator initiated.
Remote Agent for Windows and NetWare® Systems	Now includes the Continuous Protection Agent, simplifying licensing and deployment and allowing traditional tape backups of a client or continuous disk-based data protection. (Continuous data protection is not available for NetWare systems.)
Remote Agent for Macintosh® Servers (RAMS)	Support for online nondisruptive backup of Mac OS® X (PowerPC) servers gives you the flexibility to protect your heterogeneous environment with Backup Exec.
Microsoft Active Directory Agent	Provides support for online protection and granular recovery of Microsoft Active Directory data; even restores while online without reboots, greatly reducing the time required to restore granular components of Active Directory.
NDMP Option	New support for NetApp® NDMP devices greatly expands the number of network storage locations that can be selected for disk-based data protection.
Centralized Admin Server Option (CASO)	Now supporting nonpersistent connections, CASO simplifies and centralizes the management and monitoring of multiple Backup Exec servers across a distributed network or in remote offices. Enhancements to CASO include flexible backup catalog configuration, network bandwidth throttling, central management of locally created backup jobs, and custom reporting.
New Custom Reporting Engine	Allows custom reports to be generated on demand or scheduled for each Backup Exec server or centralized for multiple Backup Exec servers (requires Central Admin Server Option) and automatically distributed by email to key personnel. Included as a part of the core Backup Exec offering.
Symantec LiveUpdate™ Integration	Backup Exec proactively notifies customers and installs the latest patches, updates, and service packs. Updates can be done on demand or on a scheduled basis. Included as a part of the core Backup Exec offering.
WORM Tape Device Support	Ensures that saved data cannot be modified—enhancing overall data security. Included as a part of the core Backup Exec offering.
Veritas™ Cluster Server (VCS) Support	Expands your high-availability choices as Backup Exec supports clustering with VCS. Included as a part of the core Backup Exec offering.
Desktop and Laptop Option (DLO) Enhancements	Providing continuous protection for desktops and laptops, this option now supports the Windows XP 64-bit operating system, as well as delta file transfer. End-user recovery is simplified as the Desktop and Laptop Option now integrates with Backup Exec Retrieve (included as part of the Continuous Protection Server) for file recovery. And now five (5) user's licenses are included for free, enabling you to try out protecting the business-critical data residing outside your servers and data center.
Supports IPv6	Enhancing network support, Backup Exec 11d supports this IP standard.
Lotus® Agent	Administrators can protect the latest versions of Lotus Domino® with added support for Lotus Domino R7 and clustered Domino installations.
SAP Agent	Now supports the backup and restore of SAP applications on Windows servers running either Oracle (using RMAN) or MaxDB databases for more comprehensive database support. The SAP Agent also now allows you to protect and recover SAP applications running in a cluster environment.
Advanced Disk-Based Backup Option	Now includes true image restore for a synthetic backup, which automatically restores data sets sequentially, simplifying recovery.

Pricing and licensing changes at a glance

Item	Changes in Backup Exec 11d for Windows Servers	Price
Backup Exec 11d for Windows Servers	Backup Exec for Windows Servers license (includes the Continuous Protection Server at no additional cost).	US\$795
Backup Exec 11d for Windows Small Business Server Standard	This solution supports Microsoft Small Business Server 2003 Standard Edition and Microsoft Small Business Server 2000 and includes protection for Exchange, open files, desktops and laptops and disaster recovery (includes the Continuous Protection Server at no additional cost).	US\$595
Backup Exec 11d for Windows Small Business Server Premium	This solution supports Microsoft Small Business Server 2003 Premium Edition and Standard Edition and Microsoft Small Business Server 2000 and includes protection for Exchange, SQL, open files, desktops and laptops and disaster recovery (includes the Continuous Protection Server at no additional cost). Agent for Oracle RAC on Windows or Linux Servers	Licensed per Oracle RAC server.	US\$3,195
Agent for Windows Active Directory	Licensed per domain controller; the license includes a RAWs for remote DC Application Server.	US\$995
Remote Agent for Mac Systems	Licensed per protected server or desktop system.	US\$295
Advanced Open File Option	Reduced! Licensed per protected server.	US\$695
NDMP Option	Priced per NetApp Filer.	US\$1,595
Small Business Server Remote Agent for Windows Servers	Licensed per protected server; includes Remote Agent and the Continuous Protection Agent in a single SKU/offering.	US\$395

Upgrading

Customers who are currently operating Backup Exec 10d with maintenance, or who are current with maintenance or support contracts for previous versions of their licensed Backup Exec software, can upgrade to the appropriate Backup Exec 11d licenses at no additional charge. Existing customers who do not have current maintenance/support may purchase upgrades at specially discounted prices.

Please note: To upgrade, customers must upgrade all licenses, including agents and options, and they will receive a new serial number for each. This applies to any previous version, including agents and options.
